

## KEYS TO SIMPLIFY PART SOURCING AND STANDARDIZATION

Product differentiation and customization that lead to part proliferation are here to stay, but this complexity can be tamed when you employ an integrated sourcing and standardization solution that can:

### **Reuse parts and reduce duplicates**

Rapidly identify existing parts in a pared down catalog thanks to the automatic removal of duplicates.

### **Conform to a wide range of design formats**

Deploy company-wide standards so that designers know when to use or purchase a standard part or create a new one.

### **Break down silos to save time and costs**

Support cross-functional collaboration to shorten design cycles, boost productivity and control costs.

### **Access robust part catalogs**

Select qualified components from a comprehensive 3D catalog of 1,000+ suppliers for a virtual test.

### **Automate part monitoring and control**

Improve classification thanks to advanced analytics of connected data on a user-friendly dashboard.
